An Evening with Angular

A brief introduction to the wide world of MVC Javascript

@nerdgrass
06/2014

What is Angular.JS?

- ## Its Javascript

    Javascript is a programming language that runs in your browser. This means Angular is always referred to as 'client-side.'

What is Angular.JS?

- ## Its Javascript

    Javascript is a programming language that runs in your browser. This means Angular is always referred to as 'client-side.'

- ## Its a framework

    Frameworks have tools and structure. Compare to a library (like jQuery) which provides tools but no structure at all.

What is Angular.JS?

- **Angular has an MVW structure**

  As a framework, Angular follows a structure. That structure is a pattern called MVW, which is based off of MVC

What is Angular.JS?

- **Angular has an MVW structure**

  As a framework, Angular follows a structure. That structure is a pattern called MVW, which is based off of MVC

- **Wait. Wtf does that all mean?**

  I'm so glad you asked!

What the heck is MVC?

MVC stands for:

What the heck is MVC?

MVC stands for:

Model

View

Controller

What the heck is MVC?

MVC stands for:

Model

This is where everything associated with your data goes. External sources, internal manipulation of data, business logic goes here.

View

Controller

What the heck is MVC?

MVC stands for:

Model

This is where everything associated with your data goes. External sources, internal manipulation of data, business logic goes here.

View

This is where everything associated with the presentation of your application goes. Style, presentation, and the logic behind the user interface.

Controller

What the heck is MVC?

MVC stands for:

Model

This is where everything associated with your data goes. External sources, internal manipulation of data, business logic goes here.

View

This is where everything associated with the presentation of your application goes. Style, presentation, and the logic behind the user interface.

Controller

This is what orchestrates the flow of data between the Model and the View.

But really, what the heck is MVC?

MVC is a

PATTERN

But really, what the heck is MVC?

MVC is a

PATTERN

This means its a flexible and reusable idea.

The MVC pattern has been around since the late 70's.

Its one of the most common ways to structure software.

Wait, so what the heck is MVW?

MVW stands for:

Model

View

Whatever

Wait, so what the heck is MVW?

MVW stands for:

Model

This is where everything associated with your data goes. External sources, internal manipulation of data, business logic goes here.

View

Whatever

Wait, so what the heck is MVW?

MVW stands for:

Model

This is where everything associated with your data goes. External sources, internal manipulation of data, business logic goes here.

View

This is where everything associated with the presentation of your application goes. Style, presentation, and the logic behind the user interfacece.

Whatever

Wait, so what the heck is MVW?

MVW stands for:

Model

This is where everything associated with your data goes. External sources, internal manipulation of data, business logic goes here.

View

This is where everything associated with the presentation of your application goes. Style, presentation, and the logic behind the user interfacece.

Whatever!

Because why not?

Wait, so what the heck is MVW?

Whatever translates to MVC-ish.

- There's a bunch of different patterns that all fall under MVW or MV*

- It basically means that the framework has an opinion about application structure and is organizes itself in a way that's similar to MVC, but not exactly MVC

Talking about code is boring

Time to get our hands dirty!

Follow along at:
